BEFORE YOU BUY

3 checks before you buy any domain.

Swipe →

.com

1

The value estimate

What could it sell for at auction, on a marketplace, through a broker? If the price you're paying is above all three, walk away.

2

Its health

Does the DNS work? Is the SSL certificate valid? Does it redirect somewhere strange? Problems here cost time to fix.

3

Its history

Who links to it, and what was it used for before? A clean past helps; a spammy one can follow the name.

All three, free, in one check.
