HEALTH CHECK

What a health check looks at.

Example: solarworks.com, checked 8 Nov 2026.

DNS · NO ISSUES

Does the name point somewhere?

A, MX and NS records found. If they're missing or broken, the site and email won't work until someone fixes them.

SSL · VALID, 34 DAYS LEFT

Is the connection safe?

An expired certificate shows visitors a warning. Days remaining tells you when it needs renewing.

.com

REDIRECTS · 1 HOP, 200 OK

Where does it really go?

Long redirect chains or loops can hide where a domain sends people, or that it's broken.

Check any domain's health, free.
